Election/Restrictions

Applicant's election with traverse of Group II. in Paper No. 7 is acknowledged. The traversal is on the ground(s) that the search of both Groups are coextensive. This is not found persuasive because the search of Group I. requires providing a plurality of containers in a sterile tunnel, which would lead to a divergent field of search. For example, the sterile tunnel can be construed as being materially different from merely providing a sterile region associated with a valve and actuator. Accordingly, claims 1-21 and 28-36 are withdrawn from further consideration.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 22,23,37,39 and 40 are rejected under 35 U.S.C. 102(b) as being anticipated by Reichert.

The Reichert reference discloses a bottle filler comprising a "valve" 13 including an associated "electromagnetic actuator" 17, wherein it can certainly be assumed that all internal components of the filler is sterilized periodically and the components surrounding the valve would define a sterile region as claimed.

Claim Rejections - 35 USC § 103

Application/Control Number: 09/781,636

Art Unit: 3751

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Reichert in view of Jorss'301.

The Reichert reference discloses a filler as claimed (supra), but does not disclose a "measuring device" as claimed. The Jorss'301 reference discloses another filler having an associated "measuring device" 46(47), see Fig. 8, in order to precisely measure and control the volume of beverage into the associated bottles. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Reichert device to have a "measuring device" similar to that of Jorss in order to precisely measure and control the volume of beverage into the associated bottles.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Wakabayashi et al. and Hendriks et al. references pertain to fillers with associated sterile chambers.

Claims 25-27 and 38 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
